Professional Cure at the Institute

Radiance Professional Treatment

1

For maximum results, the cure at the Institute must start at the same time as the home cure.

One (1) Radiance cure consists of 4 or 5 consecutive treatments at the rate of 1 treatment per week during 4 weeks.

Radiance Overall Lightening Emulgel

The Radiance Overall Lightening Emulgel is presented in the form of a fresh, non-oily emulgel. Its use allows to control the melanin production, therefore to even out and brighten the complexion.

- Sold in an airless* tube allowing for precise dosage and hygienic use
**The airless tube allows to avoid air contact with the product. The product may then be preserved in perfect conditions.*
- For all skin types – including the most sensitive ones
- Paraben-free, Hydroquinone-free

Note: For optimal results, after the application of the Overall Lightening Emulgel, follow with the application of the UV-Science Daily High Protection SPF 30.

2

Radiance Lightening Essence – Dark blemishes

Thanks to its high concentration of the Bio-White Complex, the Radiance Lightening Essence allows to stop the activity of melanocytes responsible for the overproduction of melanin.

- Sold in a practical roll-on applicator for precise “laser” type use
- For all skin types – including the most sensitive ones
- Paraben-free, Hydroquinone-free

Note: For local application only.

Your complexion is uneven and lacks radiance?
A few unaesthetic brown spots
started to appear?

Dr Renaud

What causes a dull complexion?

Lack of hydration as well as a bad microcirculation may lead to blemishes and imperfections. Also, a disturbance in the functioning of the melanocytes, responsible for an even complexion, may provoke variations in the pigmentation of the epidermis.

What are dark blemishes and what causes them?

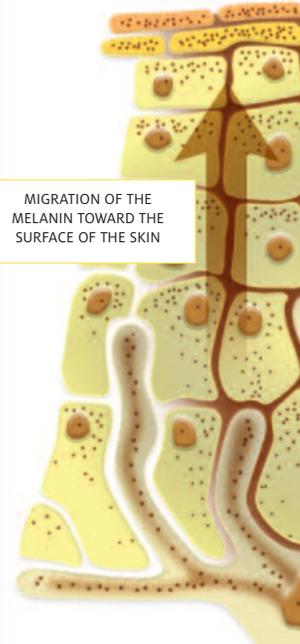

Commonly called “brown spots”, they appear over time due to an overproduction or an irregular production of melanin, the pigment responsible for the colour of the skin. When overproduced, the melanin generates cutaneous hyperpigmentation which translates into an accumulation of a more or less dark brown colour.

Most brown spots will appear on areas of the body that are often exposed to sunlight such as the face, the hands or the head in bald people.

There are several causes:

- cutaneous ageing
- overexposure to sunlight
- genetics: freckles are inherited genetically
- hormonal disruption during pregnancy or taking oral contraceptives
- the application of “spray” perfume
- following a burn: hyperpigmentation may result and lead to a spot

HYPERPIGMENTED SKIN

MIGRATION OF THE MELANIN TOWARD THE SURFACE OF THE SKIN

Radiance: For a radiant flawless complexion

Laboratoire Dr Renaud introduces the new **Radiance Overall Lightening Emulgel** and the **Radiance Lightening Essence – Dark blemishes**, both formulated with the **Bio-White Complex**.

NORMAL SKIN

SURFACE OF THE SKIN

The unique and innovative lightening “triple performance” formulation of the Bio-White Complex acts at three levels of the epidermis:

- by eliminating the melanin already produced and accumulated in the epidermis
- by stopping the migration of melanin toward the surface of the epidermis
- by preventing the production of new melanin responsible for an uneven complexion and brown spots

Owing to the complete action of the Bio-White Complex:

- the melanin production is decreased
- the complexion is brighter
- the brown spots are visibly reduced in size and colour

A few tips

Because we care about the health of your skin, here are some preventive measures to put into practice to avoid:

Brown spots:

- Always protect your skin before sun exposure
- Limit the duration of sun exposure
- Do not spray any perfume before sun exposure
- Avoid overexposure to the sun during pregnancy
- Check with your pharmacist if you are taking medication that may have interaction with UV rays

Dull complexion:

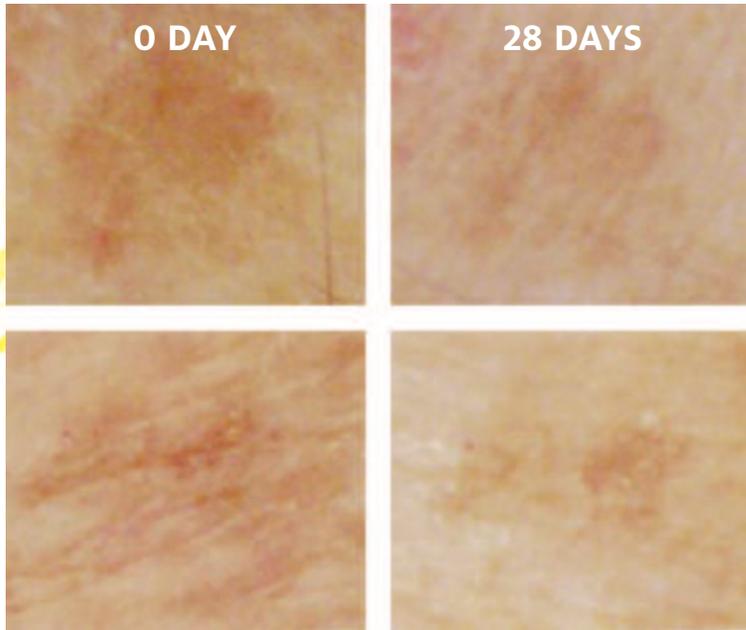

- Exfoliate your skin regularly
- Hydrate your skin by drinking plenty of water
- Use moisturizing products such as the Laboratoire Dr Renaud Hydrascience products

For a successful Radiance cure, it's important to follow your aesthetician's personalized recommendations.

The Radiance cure: proven effectiveness

Without hydroquinone

After 28 days of use:
70% of volunteers observed visible results
following the use of the product.

After 56 days of use

Radiance Overall Lightening Emulgel

The complexion is brighter	93%
The skin is more even	85%
The complexion is more luminous	84%
The skin tone is more radiant	83%
The complexion looks healthier	83%

Radiance Lightening Essence – Dark blemishes

Brown spots lightened	83%
Brown spots decreased in size	67%

* A clinical test was carried out by an independent laboratory on volunteers with Caucasian and Asian skin types.

It shows the lightening result obtained after 28 days of treatment with an ISP Vincience *Brassicaceae Extract* known under the tradename of "Achromaxyl". These pictures are the property of ISP Vincience.
